

The **KVS Cloud Hosting Service** provides clients with a secured virtual hosting environment for all of their KVS software and related applications. With this service, clients benefit from reduced IT costs by eliminating the need to purchase and maintain internal servers and are able to extend the useful life of older workstations. Additionally, this service can be accessed from anywhere allowing clients to easily tie in remote locations without the added expense and headaches of implementing secure WAN connectivity. Our technical team handles your day-to-day server management, information security, data backup and recovery, and end user connectivity, allowing you to focus on your job.
