KVS Cyberquery Report Writer 4GL

Cyberquery is an easy-to-use yet powerful Windows report writer that puts information such as reports, charts, graphs, labels, etc., to the user's desktop in seconds.

- User prompts provide simple accessibility to the end user
- Provides for analysis of information from any of the KVS modules
- Data can be easily output to external tables, databases, HTML, Excel or spreadsheets

Cyberquery provides the key to fast, informed decision making - information. Cyberquery is a high-performance ad-hoc query and production reporting system that delivers business intelligence to key personnel in seconds.

Cyberquery is unique in the reporting arena. It is a single product that meets the needs of the entire spectrum of users. Ease-of-use, speed of use and depth of accessible functionality provide both ad-hoc and production reporting for everyone from occasional users, senior managers, professional data analysts to programmers.

Eliminating the barriers to business information

Cyberquery breaks the barriers to your data, making it easier to make informed decisions. Cyberquery makes business analysis highly productive and quickly provides insight, transforming your ability to obtain the information you want, when you want it.

User empowerment

The power and simplicity of Cyberquery allow users to create everything from simple queries, business graphics and crosstab reports to production reports. Users can explore data using drilldown and easily switch between summaries and charts. Cyberquery is fully integrated with email and the web, so information can be distributed automatically. Cyberquery brings power to every user's desk.

KVS Support

KVS supplies a client library of reports that can be downloaded from the KVS website. KVS also provides training and dedicated support for report creation assistance.
