

INVENTORY MANAGEMENT

The **KVS Inventory Management** system is designed to record, maintain and track goods associated with a municipality.

The system qualifies quantity at reorder point, which vendor to reorder from, and when the items need to be replaced.

Used as a stand alone system or utilized in conjunction with Fleet & Equipment Management, multiple departments are able to control all aspects of managing products needed for daily maintenance processing.

KVS

Providing Solutions to fit your needs

**Inventory Management Integrates
with General Ledger,
Accounts Payable,
Work Order,
Fixed Assets & Fleet**

SYSTEM OVERVIEW

USER-DEFINED REORDER POINTS

COMPREHENSIVE SECURITY BY USER
