

**KVS Payroll/Human Resources** system is a comprehensive Windows-based municipal payroll system which provides complete control over all payroll and human resources functions. All pay scenarios and calculations are controlled through table-driven entries of rates, descriptions and codes. The system accommodates both centralized and decentralized environments, supporting time recording and employee file updating remotely. The system also supports applicant tracking, laser check printing, direct deposit processing, and full benefit/deduction processing. Pay increases can be automated by assigning job class, grade, and position controls. Security features ensure data integrity throughout the system. Payroll Projection and Position Control modules are also available and can be fully integrated with this system.
