

Remote backup storage solutions, or online backups, are quickly becoming the new standard for off-site backup storage, providing an additional level of data redundancy while maintaining data integrity and security.

The **KVS Remote Backup Storage Solution** is designed as a premier online storage solution for your critical KVS data. With this service, after your normal nightly backup completes, another job is run to transfer your KVS data to our secure ftp server over your high speed internet connection. Once on our system, customer data is backed using a separate backup rotation which provides:

Daily Backups Retained for 2 Weeks (Disk & Tape)
Weekly Backups Retained for 1 Month (Tape)
Monthly Backups Retained for 1 Year (Tape)
Yearly Backups Retained Indefinitely (Tape)

*All backup tapes are stored in a secured fireproof cabinet with weekly backups rotated to a secure offsite location.

At any time, clients will have immediate access to their most current backup online. Our support staff is available to assist in restoring from previous backups.

Note: File attachments are backed up locally on a daily basis and transferred to our servers each weekend.

This service is intended to complement your current backup procedures, providing you with an additional layer of redundancy for your most critical data.

Initial Setup Cost: \$250
Annual Service Cost: \$1,320
(billed quarterly or annually with Software Subscription Service)

ADDITIONAL OFFSITE STORAGE
